MEMORANDUM FOR: Chief, Information Management Staff/DO
VIA: Acting Director of Information Technology
FROM: 25X1
Chief, Information Intelligence Systems Group
SUBJECT: DO Requirement SAFE Upgrade
REFERENCE: 25X1

We have received your request to modify the DO/SAFE
Delivery 1 system to support immediate processing of precedence
cable traffic. We are processing your request for change via our
configuration control boards the first two weeks in June.

MEMORANDUM FOR: Acting Director of Information Technology

FROM:

Chief, Information Management Staff

25X1

SUBJECT: DO Requirement for SAFE Upgrade

1. The Directorate of Operations has nearly two years of experience using the SAFE system (SAFE Early Capability). While we find that the system provides the basic functionality we need to disseminate incoming electrical traffic to our operations personnel, we note one major deficiency which requires immediate attention. There is an untenable delay, sometimes up to an hour, in delivering the messages after they enter the SAFE system. As I am sure you can understand, this is unacceptable in the case of high precedence traffic related to crisis situations.

2. We therefore request your priority support in enhancing the system to eliminate, or severely reduce, this delay. We need delivery of Critic and Flash messages within 1 minute, Immediates within 5 minutes, and Priorities and Routines within 30 minutes. The traffic should be sorted in priority order such that the highest precedence traffic appears first in any queues encountered by the users. Your timely support of this urgent requirement will be very much appreciated.
